## A Monthly Epidemiology and Monitoring Report

July, 2018

### INSIDE THIS ISSUE

P. 1: Disease Summary

Food Recalls

P.2: Merlin Reportable Disease Surveillance

P.3: ESSENCE Syndromic Surveillance

P.4: ESSENCE Influenza Surveillance

P.5: Tuberculosis

Perinatal / Congenital Syphilis

P.6: HIV Prevention

P.7: Test and Treat

Rapid-PreP

P.8: Upcoming Events and Trainings

### Disease Summary

In July, a total of 437 cases of various diseases were reported to the Florida Department of Health in Broward County (DOH-Broward). Among them, there were thirty-six cases of campylobacteriosis, forty-four cases of shigellosis, ten cases of acute hepatitis B, four cases of acute hepatitis C, eighteen cases of possible rabies exposure, one case of mumps, sixteen cases of Varicella, and one case of vibriosis (*Vibrio vulnificus*).

### Food Recalls

There were nine food recalls reported in Florida for the month of July 2018.

Brand Name	Food	Recall Date	Health Risk
Rad Cat	Raw Diet Cat Food	7/6/2018	Listeria/STEC O121
Win Opportunity Knocks	Fresh and Frozen, Raw Ground Beef Products	7/18/2018	E. Coli O45, O103 and O145
King Bio	Aquaflora Candida HP9, Lymph Detox, and Baby Teething Liquids	7/20/2018	Pseudomonas Brenneri, Pseudomonas Fluorescens, and Burkholderia Multivorans
Mondelēz Global LLC	Certain Ritz Cracker Sandwiches and Ritz Bits	7/21/2018	Salmonella
Pepperidge Farm	Goldfish Crackers	7/23/2018	Salmonella
Flowers Foods	Swiss Rolls and Old Fashioned Bread	7/23/2018	Salmonella
Kraft Heinz	Taco Bell Salsa Con Queso Mild Cheese Dip	7/24/2018	Clostridium Botulinum
Associated Milk Producers Inc. (AMPI)	Whey powder	7/25/2018	Salmonella
Liparia Foods, LLC	Turkey & Swiss Submarine Sandwiches	7/28/2018	Listeria

Vibriosis (alginolyticus)	1	0	6	1	4	8	32	37

\* Confirmed, Probable, Suspect and Unknown Cases based on date of report as reported in Merlin.

Highlighted diseases/conditions are higher than expected for the current month in Broward.

The Merlin system is Florida's state repository of reportable disease case reports, including automated notification of staff about individual cases of high priority diseases. Data are extracted using event date which is usually the date of onset of illness, and when that is unknown, event date may be date of lab report, or date of diagnosis.

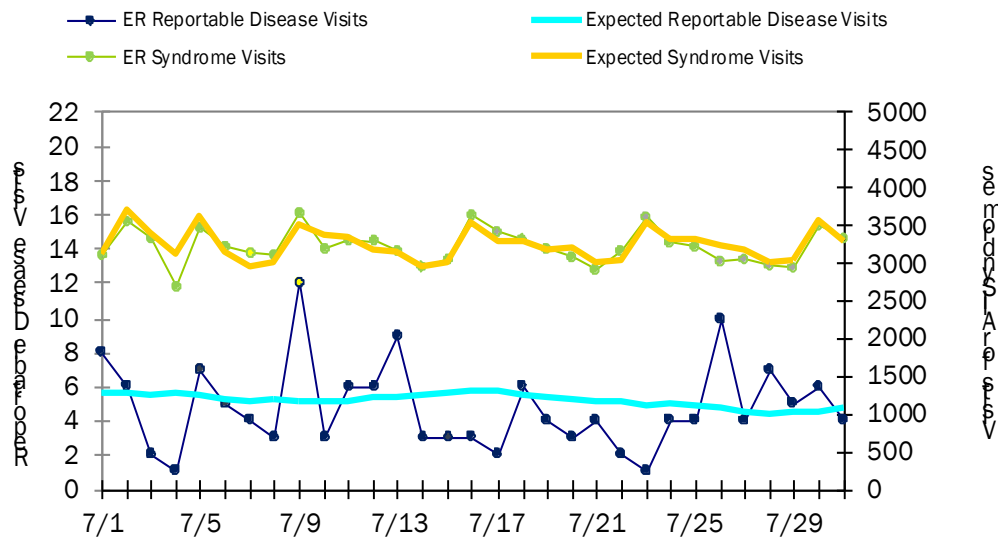

**All data are provisional**

# ESSENCE Syndromic Surveillance

The Electronic Surveillance System for the Early Notification of Community Based Epidemics (ESSENCE) was developed by Johns Hopkins University and Walter Reed Army Institute of Research. It is a syndromic surveillance tool used to monitor potential bioterrorism threats and reportable diseases. Chief complaint data is transmitted daily to the ESSENCE system from participating hospital emergency rooms. DOH-Broward monitors a total of 17 reporting hospitals in Broward County. ESSENCE groups the chief complaint data into twelve syndrome groups, including: botulism-like, exposure, fever, gastrointestinal (GI), hemorrhagic, influenza-like-illness (ILI), neurological, rash, respiratory, shock/coma, injury, and other.

ESSENCE creates automatic warnings or alerts for the monitoring of the twelve syndrome groups by comparing statistical differences in observed and predicted disease based on a 28-day average. Specialized queries have also been developed to monitor Florida state reportable diseases in Broward County. When an observed value is statistically higher at the  $p < .05$  level, a yellow warning flag is generated.

**Figure 1. ESSENCE Daily Emergency Department Visits, Broward, July 2018**

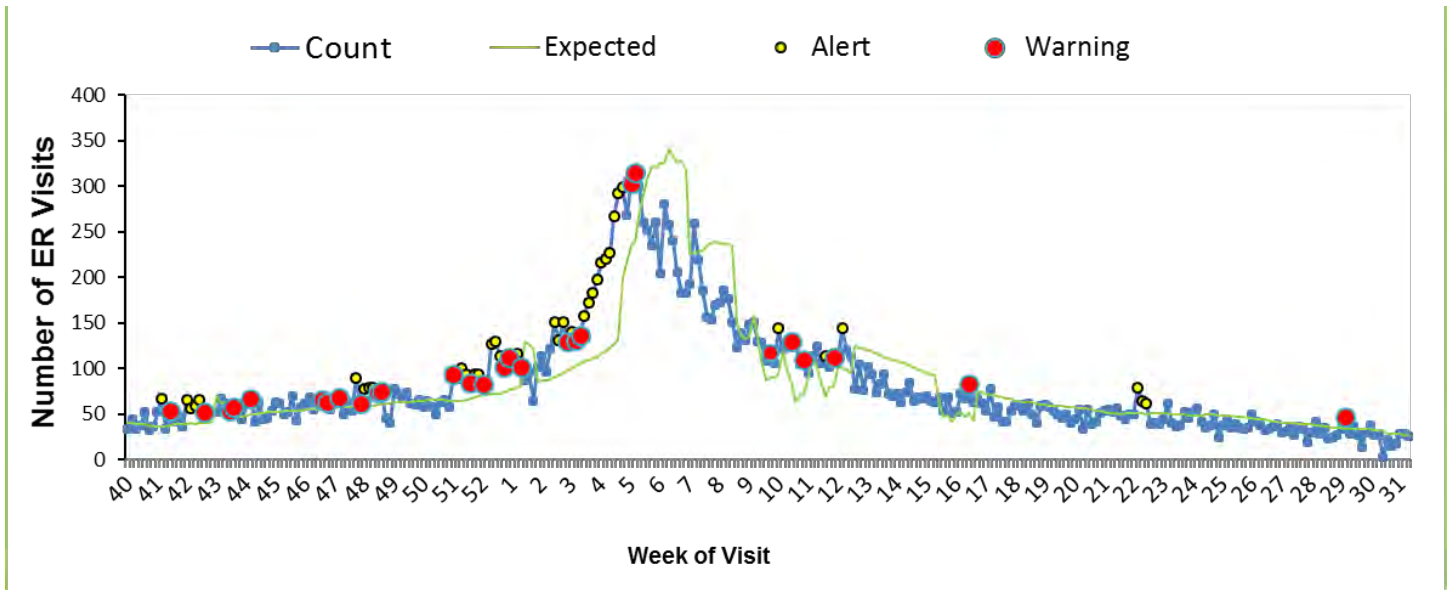

**Figure 1.** There was one warning and no alerts for E.R reportable disease visits; and one warning and no alerts for E.R syndromic visits.  
*Warning - Yellow data point*  
*Alert - Red data point*

All data are provisional.

# Influenza Surveillance

During the month of July, Influenza and influenza-like-illness (ILI) activity has continued to plateau. Statewide, activity has been steady over the last few weeks. There have been no outbreaks of ILI in Broward over the last month. As seen in the chart, influenza activity peaked in week 5 for Broward County. Florida reported their state activity to have peaked in week 6. There were no positive influenza tests detected by the Bureau of Public Health Laboratories in recent weeks in Broward County. Broward influenza activity

**Figure 2. ESSENCE ILI Visits 2017– 2018**

## Summary of Influenza and Respiratory Diseases Data

The number of visits to the emergency department for ILI was similar to previous weeks and was around the number of expected visits at this time for the month of July with no alerts and no warnings (Fig. 1). The percent-age of emergency department visits due to ILI was staying around the same.

## Influenza Prevention Recommendations

Florida Department Health in Broward County recommends that everyone take precautions to prevent the spread of influenza. The flu is a contagious disease, caused by the influenza virus, and spreads to others when infected persons cough, sneeze or talk. Common symptoms of the flu include: fever (usually high), headache, extreme tiredness, cough, sore throat, runny or stuffy nose, muscle aches, nausea, vomiting, and diarrhea (more common among children than adults). Influenza vaccines have protected millions of people safely for decades. The CDC recommends an annual flu vaccine as the first and best way to protect against influenza. With flu season almost around the corner it is very important to plan to get this vaccine. This recommendation is the same even during years when the vaccine composition (the viruses the vaccine protects against) remains unchanged from the previous season. Everyone 6 months and older is encouraged to get vaccinated against the flu even if they got vaccinated last season.

## Other recommendations include:

- Wash your hands often with soap and water or an alcohol-based hand sanitizer.
- Avoid touching your eyes, nose, or mouth.
- Stay home when you are sick, keep sick children home and check with a health care provider, as needed.
- Do not share eating utensils, drinking glasses, towels or other personal items.
- Avoid close contact with people who are sick, if possible.

\*For more information, visit [www.flu.gov](http://www.flu.gov)

All data are provisional.

## Tuberculosis

The Florida Department of Health in Broward County Tuberculosis Control Program provides coordinated care to persons with active TB disease, their close contacts and other persons at high risk for latent tuberculosis infection. Additionally, the TB program provides community healthcare and non-healthcare provider training and technical assistance related to TB control and prevention, and assure accurate case reporting through TB surveillance activities.

**Table 2. Tuberculosis (TB) Indicators, 2018 year to date through July 31st, 2018**

<b>Number of new TB infections</b>	<b>34</b>
<b>Number of new TB infections in US-born persons</b>	<b>6 (17.65% of all new 2018 TB infections)</b>
<b>Number of new TB infections in foreign-born persons</b>	<b>28 (82.65% of all new 2018 TB infections)</b>
<b>Number of new TB infections with HIV co-infection</b>	<b>8 (23.53% of all new 2018 TB infections)</b>

## Perinatal / Congenital Syphilis

The Perinatal Program at the Florida Department of Health in Broward County is a comprehensive linkage, re-engagement, and adherence program specialized for HIV positive pregnant women. This program provides intensive case management to HIV positive pregnant women; engage and educate healthcare providers in the prevention of perinatal transmission of HIV; and promotes HIV prevention through social marketing, community engagement and outreach activities.

**Table 3. Perinatal/Congenital Syphilis Indicators, 2018 year to date through July 31st, 2018**

<b>Number of newborns to HIV positive mothers</b>	<b>48</b>
<b>Number of cases of perinatal HIV transmission</b>	<b>0</b>
<b>Percent of HIV+ pregnant women on appropriate antiretroviral regimen</b>	<b>94%</b>
<b>Number of congenital syphilis cases</b>	<b>3</b>
<b>Number of clients enrolled in modified direct observed therapy</b>	<b>29</b>

# HIV Prevention Program

Following the directive of the State Health Office, DOH-Broward’s HIV Prevention Program aligns with Florida’s Plan to Eliminate HIV Transmission and Reduce HIV-related Deaths: also known as the Four (4) Key Components. This Plan includes:

1. Implementing routine HIV and STI screening in healthcare setting and priority testing in non-healthcare settings
2. Provide HIV testing, rapid access to treatment and ensure retention in care; Test and Treat
3. Improve access to antiretroviral pre-exposure prophylaxis (PrEP) and non-occupational post-exposure prophylaxis (nPEP)
4. Increase HIV Awareness and community response through outreach, engagement, and messaging

Even with enhanced strategies for HIV prevention programs, meaningful community engagement and partnerships are a requisite to achieving national, state and local prevention goals. In Broward County, FL, connects gained through contracted providers, Business Responds to AIDS partners and Physicians providers provide significant partnerships and the outcomes our progress is reflected in Table 4. below.

**Table 4. HIV Prevention Partnership Indicators**

	June 2018	Year to Date
HIV Tests Conducted by Contracted Providers	2,960	16,730
Condoms Distributed by Contracted Providers	111,150	665,886
	July 2018	Year to Date
Business Responds to AIDS Visits	82	535
Physician Detailing Visits	44	74

For more HIV Prevention reports, updates, and other resources, please visit <https://browardgreaterthan.org/>

## Contracted Providers

The HIV Prevention Contracted Providers are responsible for conducting outreach, provide HIV testing, and encouraging people in their communities to know their HIV status. For clients testing reactive, the providers ensure that they are linked to medical care and have access to essential support services to help them stay in care. For individuals testing non-reactive, they provide essential support services to help individuals remain HIV-negative. Some examples of support services provided include education, counseling, behavioral interventions, support groups, condom distribution, referral and linkage services to access other essential support services that are not provided by the provider.

## Business Responds to AIDS (BRTA)

Business Responds to AIDS (BRTA) is a free public-private partnership initiative created by the Centers for Disease Control and Prevention (CDC) in 1992 that provides businesses of all sizes such as barbershops and clothing stores with tailored resources and tools to reduce stigma and prevent discrimination against employees living with HIV.

BRTA has three primary goals:

- 1.To increase community awareness about the impact of HIV/AIDS
- 2.To motivate residents to get tested and seek prevention, treatment, and care services
- 3.To increase the number of people who know their HIV status and are linked to appropriate care

## Physician Detailing

The purpose of physician detailing is to increase Broward County providers’ knowledge and awareness on core components that will assist in improving the health care delivery of those individuals who are at risk of HIV infection or living with HIV/AIDS. These core components are the following:

- 1, Sexual health history assessments
2. Routine HIV and Sexually Transmitted Disease (STD) screening in health care settings
3. Improve access to antiretroviral pre-exposure prophylaxis (PrEP) and non-occupational post-exposure prophylaxis (nPEP)

## Broward County HIV Prevention Planning Council (BCHPPC)

HIV prevention works best when there is community involvement. BCHPPC ensures that critical HIV prevention programs are informed by and succeed in reaching Broward County’s diverse populations. Your voice, input, and support is needed to help end this epidemic. Are you ready to join us? Download the membership application (<https://browardgreaterthan.org/documents/BCHPPC-Application.pdf>), complete it and e-mail it to [jersey.garcia@flhealth.gov](mailto:jersey.garcia@flhealth.gov).

## Test and Treat

The Florida Department of Health in Broward County (DOH-Broward) and the Broward County Ryan White Part A Grantee Office are working in partnership to implement Test and Treat (T&T) throughout the Ryan White Part A system of care. T&T is a clinical program providing immediate linkage to HIV primary care and initiation of Antiretroviral Therapy (ART) at the time of HIV diagnosis or returning to care after a gap in services. The program benefits the client's health and the community by providing initial ART while working through the issues of eligibility and linkage to ongoing HIV primary care.

Table 5. Test and Treat Program Totals: May 1st 2017 - August 1st, 2018		
<b>TOTAL NUMBER CLIENTS REFERRED</b>	<b>1349</b>	
<b>Total Enrolled*:</b>	1181	88%
<b>Newly diagnosed:</b>	523	44%
<b>Previous positives:</b>	658	56%
<b>REFUSED:</b>	32	2%
<b>INELIGIBLE**:</b>	98	7%

**\*Enrolled clients:** Any referred Broward County resident who receives an initial medical provider visit and receipt of antiretroviral medications post HIV diagnosis

**\*\*Ineligible clients:** Any individual who does not live in Broward County, is in jail, deemed HIV negative with proof of HIV-negative confirmatory test result, or deceased

## Rapid-PrEP

June 1st, 2018 commenced the start of the PrEP Program at the Broward Wellness Center, known as Rapid-PrEP (R-PrEP). PrEP is the acronym for pre-exposure prophylaxis, which is a once a day medication that can prevent the acquisition of HIV. The DOH R-PrEP program will provide comprehensive HIV counseling and testing, medical and navigation services to Broward residents in addition to PrEP medication on the same day.

Table 6. Rapid PrEP Program Totals: June 2018, July 2018		
	June	July
<b>TOTAL CLINICAL VISITS</b>	<b>197</b>	<b>216</b>
<b>Total Enrolled*:</b>	154 (78.2%)	175 (81%)
<b>Private Insurance:</b>	61 (39.6%)	81 (46.3%)
<b>Patient Assistance Program:</b>	93 (60.4%)	94 (53.4%)
<b>INELIGIBLE**</b>	43 (21.8%)	41 (19%)

**\*Enrolled clients:** Any Broward County residents who received a 10-day starter pack from a Broward Wellness Center provider and enrolled with a PrEP navigator during their visit

**\*\*Ineligible clients:** Clients who either do not live in Broward County or who left after receiving their 10-day starter pack before meeting with a PrEP navigator

# Upcoming Events and Trainings

-Wednesday August 22nd

**Broward County HIV Prevention Planning Council (BCHPPC) Meeting**

1:30pm—4:00pm

DOH-Broward Main Auditorium

780 SW 24th Street

Fort Lauderdale, FL 33315

-Saturday August 25th

**Royal Palm/Embry Village Apartment Resource Fair**

10:00am—2:00pm

Royal Palm/Embry Village Apartments

2979 NW 56th Avenue

Lauderhill, FL 33313

-Saturday September 15th

**Sistrunk Community Mega Soup**

5:00pm—8:00pm

The Megaphone Community Center

808 NW 13th Terrace

Fort Lauderdale, FL 33311

-Tuesday September 18th

**National HIV/AIDS & Aging Awareness Day**

**Active Older Adult Sexual Health Olympics**

10:00am—1:00pm

L.A. Lee YMCA

408 NW 14th Terrace

Fort Lauderdale, FL 33311

-Friday September 21st

**Black Women's Health Summit**

5:00pm—8:00pm

City of Lauderdale Lakes Educational and Cultural Center

3580 W Oakland Park Boulevard

Lauderdale Lakes, FL 33311
